Tripod

The tripod is used when working with a gas burner.

The tripod is used when working with a gas burner.

To place an evaporating dish on top of the tripod a wire gauze is needed. The evaporating dish is placed in the center of the wire gauze.

When using a crucible the wire gauze is replaced by a clay triangle. The crucible is placed tightly in the triangle.

When placing the burner under the tripod, make sure that it can be moved easily if necessary.
