Lab Bottle

A lab bottle is used to store aqueous solutions.

It is available in different colors and sizes and has a ground-glass joint at the neck of the bottle.

Accordingly, the lab bottle can be sealed tightly with a ground-glass stopper.

A lab bottle must be labeled with a permanent marker so that it is unambiguously clear what the content is.

Beyond the substance itself, all H and P phrases as well as hazard symbols should be noted on the lab bottle.
